A Chemist In The White House: From The Manhattan Project To The End Of The Cold War

Synopsis

Nobel Laureate Glen T. Seaborg, who worked on the Manhattan Project in his early career, played a key role in U.S. science and arms-control policy and served both as a Presidential Cabinet member and as head of the Atomic Energy Commission. This memoir, filled with photos, anecdotes, and analysis, provides an insider's look at national science policy-making from World War II through the Bush administration.

Book Information

Hardcover: 450 pages

Publisher: American Chemical Society (November 27, 1997)

Language: English

Customer Reviews

Annotation This autobiography details the interaction of an eminent scientist, Glenn Seaborg, with the highest levels of government in the U.S. during an important period for both science and public policy. Seaborg worked for each administration from 1946 to 1996. The work is based on meticulous notes that he recorded each day. Much of the material in the chapters consists of unedited excerpts from his personal diary, which are interesting, but often too detailed for general readers. Sections at the end of each chapter contain personal reflections that provide many fascinating insights into the personalities of the nation's leaders. The book also contains numerous photos of Seaborg taken with presidents and other dignitaries.
