Customer Reviews

After a few years of delay, the central legal body of Conservative Judaism - the Committee on Jewish Law and Standards - has finally released their collection of teshuvot (responsa) on bio-medical and bio-ethical issues. These learned and insightful papers provide us with a non-fundamentalist way to apply the resources of Jewish law and ethics to modern day dilemmas. The book states that "In the Jewish tradition, the central means of addressing these concerns is through halakhah, or Jewish law. While the insights of halakhah are central to the lives of many Jews, these perspectives have also been found valuable by persons of other religious traditions and secular outlooks. This volume presents papers on biomedical ethics that integrate the resources of millennia with the most recent developments in medicine and ethical thought. The papers include some of the most thoughtful and important works in Jewish medical ethics on such issues as treatment decisions near the end of life, abortion, and reproductive technologies." The papers are presented in four general divisions, most of which are divided into a number of topical sections. Each section begins with an introduction summarizing the documents and highlighting points of special interest, including conclusions of practical application. The first division is "Responsibilities in the Creation of Life," with sections discussing artificial insemination, in vitro fertilization, and surrogate motherhood. The second division, "Responsibilities for Fetal Life," contains papers on abortion.
