Isis Unveiled

Synopsis

H.P. Blavatsky was born August 12th 1831 in Yekaterinoslav, Russia. After leaving Russia after an unconsummated arranged marriage, Helena became a prolific world traveler. She traveled the world with her second husband, Henry Steel Olcott, visiting Egypt, France, Germany, Mexico, South America, Canada, before settling in Madras, India. There, she founded the Theosophical Society. Theosophy's all-encompassing worldview proposes explanations for the origin, workings and ultimate fate of the whole of Existence. One of Blavatsky's most famous books on the subject is Isis Unveiled, her first published work on Theosophy in 1877.

Customer Reviews

Ms Blavatsky is certainly a well traveled and articulate woman, and she took about 1,200 pages to illustrate that. But the facts of what she was talking about are very slim and unfounded, and in many cases, simply non-existent. I was hoping that she would be able to elaborate on some of the Egyptian beliefs, but even that is done for the sole purpose of selling people on her questionable views on after-life, mediums, and other mystical matters. As a Certified Hypnotherapist, I was really turned off by her mystical assumptions on "mesmerism." (which led to modern hypnosis).

Hypnotherapy is a valuable tool, and it can certainly stand on its own without mystifying it with a lot of superstitious mumbo-jumbo. Many of her presumptions are simply the result of being too gullible to illusions and showmanship by professional entertainers and mystified and misunderstood scientific facts. A case in point is the statements that the Egyptian Priests could confer at great distances and refers to a story about an Egyptian Queen that talked with someone over a great distance up the Nile River. (Probably with the "aid" of some Magi.) She tries to lend credence to the fable by assuring the reader that "even now" scientists were discovering the art of "closing the distance between people" to the extent that not only can conversations take place, but the other persons voice can actually be recognized! Astounding, right? But then she goes on to say that the research and experiments were being conducted by a Mr. Alexander Graham Bell... (Kind of puts it in a different light, doesn't it?) I don't think I have ever read a book that sent me to the dictionary so many times for word-meanings and clarification!
